By Camera Club of New York

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 edition. Excerpt: . comes from decomposition of hypo. The trouble is that sodium sulphite in solution oxidizes to sulphate, which has not the power to protect the hypo from the acid. Even pure sulphite will fail if the bath stands for a time, and impure sulphite simply hastens the decomposition. You might make up a saturated solution of hypo in a large jar; take as much as needed for use, diluting it with an equal volume of water, and adding the liquid bisulphite. Spots; Exhausting A Developer; Drying Prints.--A. K., Westfield, N. Y., asks: (1) Why do my films have very small specks on them? I use the tank for developing. (2) How many 4x5 prints can I develop with three hundred ounces of M.-Q. developer of regular Eastman formula? (3) How are prints dried with alcohol? Ans.-- (1) You should have sent a film showing the defect....
