

Psychological monographs Volume 30, nos. 134-139 general and applied

By American Psychological Association

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 138 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: . . . and it adapts itself. There is an inner, active, selective agency at work, but the control exercised by this agency upon the destiny of the creature is mechanical and not intentional. If there is intelligence, it is still mechanically controlled intelligence. Learning may be said to have taken place, because the variation, unlike that in original instinctive response, is not merely a mechanical choice between persistent possibilities, but is the result of a permanent suppression of one original tendency in favor of another original tendency. Thus the act is productive mechanically controlled intelligence. d. Associative adaptation. --In the types of adaptation thus far noted, no new neuron systems are formed. There is often, however, an excess neural discharge. This comes especially in times of emotional excitement. Many random movements are then made as the excess discharge forces itself through new channels. If discharge through a new...
